Electronic Client Record (ECR)

1 Electronic Client Record (ECR)

ECR is a web-based application, the module covers indicators of Family Planning, General Health Services and LARC Removal. It consists of internally configurable options, using built-in CMS. The services data is automatically aggregated in cLMIS reports and analytics.

1.1 ECR Landing Page

This page presents a summarized view of the overall information of facility based on facility status, number of visits at specific facility, total number of clients and the corresponding total number of visits.

1.2 Search Client

Through Search Client menu,user can search the client using any keyword via patient name, father name, CNIC, CRC number etc. to filter the matching records. On search results all client details and corresponding visit details are displayed. The system also allows the user to edit an existing visit or client onformation or add a new visit for registered clients in search client.

1.3 Add Client

For new client registration click Add Client displayed under Electronic Client Record menu. Following are the required client details for new client registration:

- **Serial Number/Registration Number**: A system generated number to uniquely identify a register patient

- **Identification of Client** :Nationality of the patient
